EXPLANATION

The study is based on a probability sample of the 1992-93 year 12 cohort. A total of 20,170 year 12 students were randomly selected at the school level, and 16,900 students completed the survey. The response rate was 84%. The sample was selected using a two-stage sampling process. First, schools were selected using a probability-proportional-to-size sampling method, where the size was determined by the number of year 12 students in the school. Second, students were selected within each school using a simple random sampling method. The response rate was 84%.
